

### What Xtreme Motorworks is doing during this time

XMW is a smaller company - and we are taking every measure to stay safe and keep our customers safe.

Here are processes in place at this time. Only 1 person, myself, will do packaging.

- Any new metal parts are being left outside for 72 hours before they are brought into the shop.
- Any parts being shipped are being ran thru our powder coat over at 300 deg. to kill any possible contaminates.
- Parts are packaged and box is sprayed with Lysol, inside and out.
- Shop is sprayed with a water/bleach in the production area and shipping area prior to any work being performed.
- We ship UPS and once in their control, we cannot control handling once out of our hand.

Our goal is to stay open and keep going. We could expect some part delays to parts coming in but will keep you informed as issues arise.

Sincerely,

Xtreme Motorworks
